

## **MODULAR ARRAY ARRANGEMENTS**

### Abstract of the Disclosure

The present invention pertains to modular array arrangements comprising a carrier and at least one insert for attachment to said carrier, which at least one insert may be positioned in or on said carrier in a predetermined, fixed orientation. In addition, the present invention relates to an insert having first connecting means and at least one section adapted for the application of samples, to a method of preparing a modular array arrangement and to a method for using such modular array arrangements in a screening assay.
